ROSA MULTIFLORA The Miracle Living Fence

2H1—Protect and beautify your property. A cheap practical fence that grows so dense no person or animal can get through.

The plants grow 6 to 8 ft. tall and 5 to 7 ft. wide, are tough and fast growing. Covered with a multitude of white flowers in spring; loaded with attractive red fruit in fall and winter which provide food for wild life.

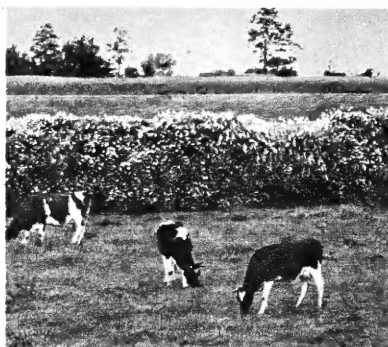

Recommended by U. S. Soil Conservation service for livestock farm fence and for factories, parks, estates, institutions, residences, etc. that wish to keep animals and trespassers off their property. Present recommendation by U.S.D.A. are to plant 1 ft. apart in a single row for stock tight fence. Ornamental hedges can be planted 18 inches

apart and kept trimmed to desired height. Trial fences planted throughout east, west and south have proven successful. North of Milwaukee there is danger of winter injury. The general use of rosa multiflora is just beginning but its value is proven for cheap fence, game management, property protection, windbreaks and erosion control to soil and crops, will last for generations.

FALL ROSE PLANTING INSTRUCTIONS

Plant roses this fall for earlier and more abundant blooms. All roses offered are large, 2 yr. Northern Ohio field grown plants. All are everblooming and will flower continuously for you from next May until early winter. Follow simple directions for healthy plants and abundance of blooms. Plant below the bud or where branches start. This is usually 2 inches deeper than soil marks where they have grown in the nursery.

After planting cut off top of rose plants 10 to 15 inches above soil. Then mound earth 10 to 18 inches high (as shown in picture). Cover with leaves, straw or coarse material to keep winter rains from washing soil. Remove or level off mound of earth next spring when new growth starts. Roses cared for in above manner give greatest satisfaction and from our experience you can produce more prize winning blooms. Plant roses in beds 2 ft. apart in alternate rows.

Thousands of Evergreens READY TO GO!

Hundreds of Balled and Burlapped evergreens at reduced prices this fall. Many sizes and varieties not listed in catalog. Drive to the nursery for choice landscape varieties all growing in our nursery.

HOW TO PLANT EVERGREENS—Plant evergreens immediately upon arrival so they do not dry out. Dig hole 8 to 10 inches larger than the ball of earth or root spread if wrapped in peat and shipped bare root. Set evergreen 1 to 2 inches deeper than soil marks on the trunk. Fill hole half full of rich top soil, firm well, then water.

EVERGREEN DIGGING NOTICE—All evergreens for shipping will be fresh dug from our field bare root and wrapped in moist peat. Present day delivery and packing costs make it too expensive to ship balled and burlapped. Our experience shows that bare root evergreens deliver better and grow just as well. Balled and burlapped evergreens available at nursery.
